## Language

Bangla ( Navitve )
English ( Comfortable )
Hindi ( Fluent )

## Projects

### Vehicle Funland

time peirod ( 04 days )

toy website ( single page application )

Client-Github | Server-Github | Live-link

- React Helmet facilitates dynamic title changes during route transitions, ensuring that the title accurately reflects the current context or displayed content.
- The gallery section utilizes a JavaScript function that automatically updates images every 2 seconds, ensuring a seamless and dynamic browsing experience.
- The search system utilizes MongoDB's query operation to empower users to easily locate their desired products.

### Recipe Fusion

time peirod ( 03 days )

recipe website ( single page application )

Client-Github | Server-Github | Live-link

- Firebase simplifies sign-in by supporting various authentication methods like email, Google eliminating the need for users to create new credentials.
- Using Tailwind CSS to create a website's UI/UX results in a visually appealing and unique design that sets it apart from others.
- By implementing a lazy loader, the React performance is optimized, resulting in an improved user experience.

### Melodious Academy of Music

time peirod ( 06 days )

academy website ( single page application )

Client-Github | Server-Github | Live-link

- Protected routes control access to data, while JWT tokens authenticate users and authorize them to access resources.
- Easy Payment is a payment system that allows students to pay for classes quickly and easily. Students can view their payment history and enrolled classes in real time through the integrated Stripe payment gateway.
- MongoDB and Express.js power the website's backend, utilizing CRUD operations to safeguard and optimize user data, ensuring peak performance.
